# ShelfMate

Mikołaj Kabała

## Project Overview

ShelfMate is a Smart Library & Book Discovery App.  It is a mobile application designed for book lovers who want to organize their personal library, discover new books, and track their reading progress. The app lets users manage their book collection, rate and review books, and discover new reads with a Tinder-style swipe feature.

## Core Features

- **User Authentication**  - register, login, logout
- **Personal Library** - add books, update status (Reading, Completed, To-Read)
- **Tinder-style Book Discovery** - swipe left/right (swiping right adds book to wishlist or library)
- **Book Lists** - custom list with user's favourite user's books or books to read
- **Reviews & Rating** - user can review and rate books

## Target Audience

- Readers who want a digital space to track their books.
- Casual readers looking for book inspiration through swiping.
- Users who want to explore personalized recommendations.
- Anyone interested in a modern book-tracking solution.

## Technology

ShelfMate will be developed using React Native for its cross-platform capabilities, ensuring smooth performance on both Android and iOS devices.
